

# A.I. Voices

The sound of A.I. voices has come a long way in just the last year! However, A.I. is still computer produced and does not offer the full emotional range or inflection of specific words or phrases like a human does.

We are in the experimenting stages with the A.I. program. Below are some tips and FYIs to help you get the most out of ordering an A.I. voice.

1. In the **read directions**, please only pick from one of the emotions below:

**ANGRY, SAD, OPTIMISTIC, CURIOUS, or SURPRISED**

2. There is a **165 word limit per script** on A.I. orders. This is up to approximately :60 seconds (give or take a couple of seconds). Sorry, longer reads for A.I. are not available at this time.

3. **Do not abbreviate anything.** Words need to be spelled out in full, including states. Numbers also need to be spelled out instead of entered numerically. Otherwise the end result may not be what you are expecting.

4. You will receive one take from the voice you order. Unfortunately, we do not have a way to alter the inflection or the ability to emphasize any words or sentences. This may change as the technology improves over time.

5. If you are not completely satisfied with the A.I. vo, you can book one of our human talents & we will take the cost of the A.I. voice and apply it to the human vo rate.

\* Please contact us with any questions before you place an A.I. order. More voice styles and languages will be added. To be updated of new additions, please ask to be added to our Planet Perk list so we can email you.
